ABSTRACT

The importance of medicinal plants in traditional health care practices has been emphasized at the global level by world health organization. Plants have been used since old days as a traditional, valuable, cheap, local source of medicine in all parts of the world. The traditional knowledge of medicinal plants of a particular region for curing various diseases/ailments has been the practice all over India since long time. The world health organization, has reported that 80% of the world population relies on traditional medicines as first aid treatment for various health problems. WHO has recommended the use of alternative traditional health care systems as first aid for treating various health problems? In recent years use of plant based medicines is on rise due to various advantages. In view of the above information the present study aims to gather information on traditional medicinal plant resources from Maival Taluka, District Pune, used for treating various diseases/ailments as a first aid treatment in the region. Accordingly a Manual Random survey was undertaken. A questionnaire was prepared & interviews were undertaken to fill up the questionnaire. Approximately 515 persons were interviewed. The study helped in documentation, creating awareness & application of the knowledge of medicinal plants used in the region, amongst wider section of the people residing in the area.

Keywords: Traditional, Medicinal plants, Disease, Maival, First-aid

INTRODUCTION

Man has been dependent on plant based traditional medicines since time immemorial. This knowledge of using plants to obtain medicines to treat various ailments has been gradually accumulated and transmitted from generation to generation in the course of several centuries, forming the basis of various indigenous medicinal systems such as Ayurveda, Unani and Siddha. During the last few decades, an increasing interest in the study of traditional uses of medicinal plants has been witnessed in different parts of the world, mainly due to high cost and other disadvantages associated with allopathic system of medicine. Additionally, the treatment of various diseases with indigenous medicinal plants has considerable health and economic benefits. Traditional knowledge in this regard has been conserved for generations in different communities in several parts of the world.
Pune District is in the western region of Maharashtra, India. It is bounded by Thane district to the northwest, Raigad district to the west, Satara district to the south, Solapur to the southeast, and Ahmednagar to the northeast. Pune district is located between 17°5 to 19°2 north and 73°2 to 75°1 east. Average rainfall in the district is 600 to 700 mm. Pune stands on the leeward side of the Western Ghats. Pune is at an altitude of 559 m (1863 ft.). Administratively the district is divided into 15 talukas. The present study has been carried out in Maval Taluka. Maval is a Taluka in Pune District of Maharashtra State, India. Maval Taluka Head Quarters is Maval town. It belongs to Desh or Paschim Maharashtra region. It belongs to Pune Division. Maval Taluka is bounded by Talegaon Dabhade Taluka towards East, Khalapur Taluka towards west, Mulshi Taluka towards South, Karjat Taluka towards North, Lonavla City, Talegaon Dabhade City, Pimpri Chinchwad City, Pen City are the nearby Cities to Maval. Rakshaswadi is the smallest Village and Induri is the biggest Village. It is at the 616 m elevation (altitude). It is Hot in summer. Maval summer highest day temperature is in between 33 °C to 40 °C. Average temperatures of January is 24 °C, February is 25 °C, March is 27 °C, April is 28 °C, May is 29 °C. There are near about 100 villages in the Taluka.

**LOCATION OF TALUKAS OF PUNE DISTRICT IN MAHARASHTRA [MAP2]**

**DATA COLLECTION METHOD**

Present study is based on ethno botanical survey of Maval taluka. The field work in the villages of Maval taluka took place between July 2012-july 2013. In order to collect information questionnaire was prepared. Key informants, elderly persons, vaidus, other concerned people were involved in interviews and discussions. The data collected on medicinal plants used included local name, part used and uses. All plant specimens were identified using local flora.

**RESULTS AND DISCUSSION**

Our study has revealed that people in study area still depend on the traditional medicines for the treatment of several ailments. The survey showed that people of study area use 60 plants species belonging to 31 families to treat/cure/use as first aid treatment on a variety of ailments/health problems. The herbal preparations made from the traditional Medicinal plants were mostly used for the treatment of Stomachache, as Carminative, to relieve Constipation, to cure Flatulence, as Laxative, as Appetizer, to cure Fever Cold and Cough, as Antihelmintic, To treat Skin diseases, as Moisturizing agents, as Antibiotics, To treat Wounds, for reducing Body heat, as tonic for body strength, for Headache, for Acidity, Scabies, for Earache, For Diabetes, as Aphrodisiac, Leucorrhoea, to treat kidney stones, to increase Lactation, on Snake and Scorpion-bite, against Sunstroke, Toothache, piles, Body massage, Jaundice, urinary problems, to provide Soothing effect. To cure throat infection, to improve lactation, etc.

The study showed that a good number of the collected plants were used for the treatment of multiple diseases. It was observed that different parts of different plants are used as medicines. The medicines are administered/consumed in various forms like paste, powder, decoction, juice, etc.
## Table 1: A list representing some botanicals and/or their particular parts used for treatment of various diseases in Maval Taluka

<td>TalimkhanaKolunda</td>
<td>Hygrophila spinosa</td>
<td>Acanthaceae</td>
<td>Leaves and seeds are used in Jaundice. Seeds taken internally along with milk, which acts as tonic, aphrodisiac.</td>
</tr>
<tr>
<td>22</td>
<td>Aghada</td>
<td>Achyranthes aspera</td>
<td>Amarantaceae</td>
<td>The root decoction is used in scorpion stings. The root ash is given to children in cough. Leaf juice drops are put in nostrils to cure head-ache.</td>
</tr>
<tr>
<td>23</td>
<td>Kate-koranti</td>
<td>Barleria prionitis</td>
<td>Acanthaceae</td>
<td>Leaf ash with butter is used on Leucoderma. Crushed fresh leaves are used for toothache and gum ailments.</td>
</tr>
<tr>
<td>24</td>
<td>Bhilawa/ Bibbu</td>
<td>Semecarpus anacardium</td>
<td>Anacardaceae</td>
<td>The fruits are used in the treatment of cough, piles and boils.</td>
</tr>
<tr>
<td>25</td>
<td>Karvand</td>
<td>Carissa congesta Wt. Icon.</td>
<td>Apocynaceae</td>
<td>Decoction of roots is given to women to relieve from delivery pain after child-birth. Latex is applied on lips to protect them in winter.</td>
</tr>
<tr>
<td>26</td>
<td>Rui</td>
<td>Calotropis procera R. Br.</td>
<td>Asclepidaceae</td>
<td>Latex is diluted with cold water and the mixture is applied on forehead in headache.</td>
</tr>
<tr>
<td>27</td>
<td>Apta</td>
<td>Bauhinia racemosa Lam. Encycl.</td>
<td>Caesalpiniaceae</td>
<td>Bark extract is given in indigestion.</td>
</tr>
<tr>
<td>28</td>
<td>Babhul</td>
<td>Acacia nilotica (l.) Wild.</td>
<td>Mimosaceae</td>
<td>Powder of stem bark mixed with some common salt is applied on teeth and Gum to stop offensive smell of mouth as well as a used as tooth powder. Young twigs are used for cleaning teeth.</td>
</tr>
<tr>
<td>29</td>
<td>Nirgudi</td>
<td>Vitex negundo</td>
<td>verbenaceae</td>
<td>Leaves mixed in hot water and used for bath to reduce’Vaat’.Mixture of leaf juice and urine of cow is taken internally by women in irregular menstruation.</td>

CONCLUSION

The results of this study can be useful to provide affordable, easily / locally available healthcare for the local people. We conclude that this treasure of traditional knowledge has tremendous potential. However due to lack of scientific documentation and validation, this traditional knowledge is not utilized to its true potential and is on the verge of extinction. Considering the applied value of traditional knowledge, it has become necessary to scientifically document and validate this knowledge & make it available for future generations.
